*Priced at just \$19.00 for single-user and \$39 for unlimited, multi-user license!*

*10-Key Calculator Plus' 10-key Mode!*

## What is 10-Key Calculator Plus?

The 10-Key Calculator Plus (TC+) is a calculator designed for use with any program. TC+ is a full-featured tape calculator that you can run with any application. Introduced in 2007, ProWare's 10-Key Calculator Plus allows you to easily cut, copy, and paste the results, create a running tape, and even print the results to a printer to attach with documents. You can choose to run TC+ as a true 10-key calculator or as a handheld calculator. Both have the look and feel of a real calculator and interact with the mouse or keyboard for quick data entry. You can scroll backward and forward on the tap and even cut, copy, and paste multiple lines of numbers and results into any Windows-based program. 10-Key Calculator Plus even displays the information that is currently in your memory keys so there's no need to press a button to recall it. TC+ was designed with you, the professional, in mind, all at a very reasonable price.

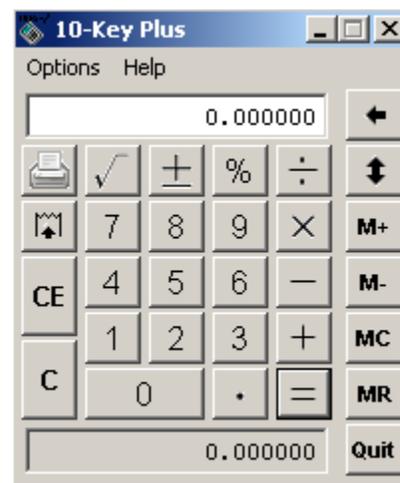

10-Key Calculator Plus provides maximum utility and flexibility because it can be used with either a 10-Key layout or a handheld layout. TC+ has a true look and feel of a desktop 10-key calculator. You can choose to keep the calculator always on top of any other programs you are running or it can be docked in the task tray and recalled whenever it is needed. In the handheld mode, it truly has the look and feel of a handheld calculator and becomes even more useful because it has a running tape that can be printed to a printer.

10-Key Calculator Plus always displays the mode it is running in. In addition, you can elect to show or hide the tape. You can also choose the number of lines displayed on the tape. Choose from 5, 10, 15, or 20 lines of the tape displayed. Regardless of the number of lines shown for the tape, you can scroll backward and forward through the tape to find the numbers you are looking for. You can select anywhere from 0 to 6 decimal places to display. Now you have access to a desktop calculator in Windows that you can make look and feel just like the calculator on your desk!

10-Key Calculator Plus also provides online help to guide you through its many other features. TC+ will become indispensable as you begin to use it with all of your various applications. There is no longer any need to interrupt your work to "run the numbers" with your old calculator. Since TC+ can run on top of any other applications, you always have it at your fingertips. Even more useful is its ability to cut, copy, and paste directly into the application you are using. Printing the results to attach to any document is a snap. Simply select the print option, identify the printer to print to, and the results are printed just as they appear on your screen.

Data entry is easy, flexible and intuitive. Once you select the type of

calculator (handheld or 10-key), simply enter the numbers and functions, and then determine whether you want to print the results or not. The scroll feature allows you to go back and find errors or previous results and can be saved indefinitely. That and the other features previously listed make the 10-Key Calculator Plus the right choice for anyone still using a 10-key desktop or handheld calculator. Don't take our word for it, try 10-Key Calculator Plus free for 30 days and see for yourself!
